About Sakthi Exports

WHO IS BEHIND?

Incepted in 2005, Sakthi Exports is a privately owned Indian company involved in the manufacturing, formulating, packing and exporting of biodegradable agricultural products. We convert agro waste into a value added product. Our company is headquartered in Sivaganga (Madurai), Tamil Nadu. We are an ISO 9001:2008 certified company. We have also been certified by the Food & Drug Administration (FDA).

The reason we are able to offer a wide variety of products under one roof is because of our vast infrastructural unit. We clean, process and manufacture all our products at our facility. We follow hygienic practices. We also conduct stringent quality control measures. We test our products on various parameters such as freshness and wholesomeness. We only supply the product once it meets the set standards. Our product range comprises of coconut products, coir and coco peat products, jaggery, gherkins and areca leaf plates. From us 'you get what you need'.

Our team comprises of qualified and trained professionals who have good knowledge and experience from sourcing the products to packing them. We have established cordial relations with farmers and collect the products on a contract basis.

We have our clients spread across the domestic market. Our clients are spread across industries such as food and beverage, home furnishing, restaurants, agriculture, horticulture and floriculture.

- 250, 500ml in PET jar
- 200, 400, 1000ml in wide mouth glass jar
- 200 litres in HDPE barrel

Coconut Palm Sugar

Benefits

- It is metabolized slowly and easily by the human system
- Is high in Potassium, Magnesium, Zinc and Iron
- No pesticide detection
- No residue of agriculture chemical
- No additive added

Nutrition Value

Component	Quantity
Moisture	6%
Protein	432 mg
Minerals	5.24 mg
Carbohydrate	11.0 mg
Calcium	18.9 mg
Phosphorous	1.9 mg
Iron	5.2 mg

Use

- Insulin levels
- Insulin resistance
- Slow Digestion and Absorption

Gherkin

We Sakthi exports are exporters of High quality Gherkins from South India. We collect the handpicked gherkins directly from farmers which is cultivated in organic method under our supervision from seeding to harvesting. Selective gherkins are graded, washed, pickled and packed in food grade HDPE barrels at our own hygienic process facility.

Grade

A+ Grade	300+ (300+ nos/kg)
A Grade	160/300 (160 – 300nos/kg)
C Grade	120/150 (150-300nos/kg)
D Grade	80/120 (80-120nos/kg)
E Grade	30/40 (30-40nos/kg)

Products

High quality gherkins are pickled as following
Gherkins in brine
Gherkins in acetic acid
Gherkins in natural alcoholic vinegar

Packing

High quality washed gherkins are packed in food grade HDPE barrel with an adjusted mechanism that pushes the gherkins down under the cover liquid which fills the barrels entirely. Lid with gasket and O-ring is used to avoid any external contact.

Coir Door Mats

We Sakthi exports (ISO 9001:2008 certified) are one of the leading manufacturers and exporters of Coir tufted mats and matting from India. These mats and matting are also called us coco mats, fiber mats, coconut coir mats and tufted mats. It can be used in both indoor and outdoor use.

40 x 70	6700pcs	6100pcs	5200pcs
45 x 75	5600pcs	4900pcs	4200pcs

We are having capacity to make the mats in customized size & designs as per the buyer's requirement.

Coir Yarn

Coir Yarn is made out of the Fiber extracted out of Coconut Husk. It is spun from superior Coir Fiber by hand as well as with the help of traditional looms and fully automatic spinning machines. Coconut Coir Yarns and Ropes possess a lot of tensile strength and are handy to use and store. They are economical and are environmental friendly.

The Coir Yarn is of different qualities/grades based on the quality of Fiber used, nature of the twist and the presence of impurities. As the top Yarn Manufacturer in India we offer products that serves various industrial purposes. Our products are versatile and come with the promise of workmanship which has made us the leading Yarn Manufacturer in India..

Features

- Purity
- Biodegradable
- Higher breaking strength
- Better elongation capacity

Packing

Packing As per the customer's requirements

Bale Weight 10 Kg

Container Loadability As per the customer's requirements

Cocopeat

Coco coir/peat is the 'coir fiber pith' or 'coir dust' produced as a bi-product when coconut husks are processed for the extraction of the long fibers from the husk. Coco coir/peat is the binding material that comes from the fiber fraction of the coconut husk. A very special grade of coir dust is washed, screened and graded before being processed into various Coco coir/peat products for horticultural and agricultural applications. Coco coir/peat is a multi-purpose soil conditioner and growing medium. It is consistent and uniform in texture. It is a completely homogeneous material composed of millions of capillary micro-sponges that absorb and hold up to eight times of its own weight in water. The natural pH of 5.7 to 6.5, assures that coir will hold and release nutrients in solution over extended periods without re-watering.

Coco peat is used as a soil additive. Due to low levels of nutrients in its composition, coco peat is usually not the sole component in the medium used to grow plants. When plants are grown exclusively in coco peat, it is important to add nutrients according to the specific plants' needs. Coco peat from Sanraa Global contains several macro- and micro-plant nutrients, including substantial quantities of potassium. This extra potassium can interfere with magnesium availability.

Uses

- A single kilogram of coco peat will expand to 15 litres of moist coco peat
- As a substitute for peat, because it is free of bacteria and most fungal spores, and is sustainably produced without the environmental damage caused by peat mining
- Mixed with sand, compost and fertilizer to make good quality potting soil. Coco peat generally has an acidity in the range of pH - 5.5 to 6.5. It is a little on the acidic side for some plants, but many popular plants can tolerate this pH range
- As substrate for growing mushrooms, which thrive on the cellulose. Coco peat has high cellulose and lignin content

Neem Oil

We Sakthi exports are leading merchant exporter of Neem oil.

Neem oil is derived by pressing the seed kernels of the neem tree. It contains vitamin E, other essential amino acids and some percentages of fatty acids.

Neem oil is excellent moisturizing oil and contains various compounds that have insecticidal and medicinal properties.

Uses

It is used in making shampoos, toothpaste, soaps, cosmetics, mosquito repellants, creams and lotions, pet products like pet shampoo, etc. Neem oil is used for treating many skin diseases viz. eczema, psoriasis, skin allergies, etc. and is being studied for making contraceptives in India. Neem products are used for treatment of a whole gamut of diseases, including skin infection, cardiovascular disorder, diabetes and cancer.). It has important fungicidal and Antimalarial properties. Nimbidin from neem oil is effective in various skin diseases. Neem oil helps to control common pests like white flies, aphids, scales, mealy bugs, spider mites, locusts, thrips, and Japanese beetles, etc.

Packing

- 100, 250, 500, 1000, 5000ml in PET bottle.
- 200 liters in a HDPE barrel

Neem Cake

Neem cake organic manure protects plant roots from nematodes, soil grubs and white ants probably due to its residual limonoid content. It also acts as a natural fertilizer with pesticidal properties. Neem seed cake also reduce alkalinity in soil, as it produces organic acids on decomposition. Being totally natural, it is compatible with soil microbes, improves and rhizosphere microflora and hence ensures fertility of the soil. Neem Cake improves the organic matter content of the soil, helping improve soil texture, water holding capacity, and soil aeration for better root development.

Neem cake is the residue left after oil has been pressed form neem seeds.

It is used as an organic manure resulting in high yield of cops and plants. Chemical composition of Neem Seed Cake

Why use Neem Cake as a Fertilizer?

- Very Cost Effective
- Better yield than conventional Urea and Fertilizers
- Rich source of NPK and other Micro Nutrients
- In comparison to urea which is a nutrients collector neem cake itself contains nutrients for the plants and maintain power of soil.

Other Benefits

- Control Nematodes and other soil pests.
- Improve soil organic content.
- Can be used with other fertilizers/Urea simultaneously
- Safe for earthworms

Coconut Water Powder

Coconut Water Powder is a high Nutritive and Re hydrating drink. It contains more potassium than a banana. It contains Balanced Electrolytes. It has more eco-accommodating, not so much costly but rather more flexible than bundled coconut water. Simply include the moment coconut shell powder in drinking water, and you will get an invigorating taste of coconut water. Capturing Taste-To make you need it ordinary. Sufficiently moderate to permit you have it regular.
